(54) AUCTION SYSTEM

(57)Abstract:

**PURPOSE:** To reduce the labor on the auction market side to smoothly sell and buy materials at auction and to give fair and accurate commodity information.

**CONSTITUTION:** A commodity photographing table 10 is provided in the vicinity of a storage space for auction of a package case in which commodities are put; and when a taken-out commodity is put on this table, an ITV camera 11 outputs picture information of this commodity. A bar code indicating commodity information such as its home and name stuck to the commodity or the package case 4 is read by a bar code reader 15, and this read information is sent to a first personal computer 16. The first personal computer sends bar code read information to a second personal computer 17. The second personal computer synthesizes information from the first personal computer and picture information from the ITV camera and outputs the result to an auction display board 20. The auction display board 20 receives the signal from the second personal computer to project information related to the commodity and picture information on a display screen. The first personal computer prints the code of a buyer, who made a successful bid, by a label printer 22, and this label is stuck to the package case 4.
